DOPAK® Process Sampler Type DPM
on/off configuration (A1) / (A2)

The ability to connect the sampler close to the sample point ensures optimal retrieval of a representative and contamination free sample. The DPM type sampler in on/off configuration allows the product to flow directly into the sampler via a two-way valve.

1 OPERATION/FUNCTION

0 - off
Provide a new septum on your sample bottle. Insert the bottle, with cap and septum into the sleeve until the septum is pierced by the needles. Put the bottle retaining clip in place.

1 - sample
Turn the handle to the “sample” position, allowing the product to flow into the sample bottle. When the required amount has been taken, turn the handle to the “off” position.

2 - off
Remove the bottle retaining clip and pull the bottle out from the sleeve. The septum reseals automatically.

2 TYPICAL P & ID
