The ability to purge the sample point ensures optimal retrieval of a representative, contamination free sample. The S32-G type samplers provide a system purge in addition to sampling in a sample cylinder and the ability to depressurise the quick connect couplings before disconnecting the sample cylinder. The unique design offers a one handle operation by multiple valves. These features provide sample accuracy and safety.

1 - system purge
Turn the handle to the "process" position, allowing the sample cylinder to be filled. To ensure a representative sample, this position can be held for any required time.

3 - depressurise/vent
Turn the handle to the "vent" position. The internal connection between the sample cylinder and the vent connection has now been made. The quick connects are being depressurised to the vent connection.

4 - off
Turn the handle to the "off" position. Disconnect the flexible hose. Remove the sample cylinder and connect the flexible hose to the top quick connect coupling.
3 FEATURES/ADVANTAGES/PROPERTIES

- Sampling in cylinder at process pressure
- Representative sampling
- Zero dead volume
- Closed sampling
- One handle operation of multiple valves
- Fixed volume sampling
- Purging of sampler
- No direct connection between vent line and process lines
- Depressurising of quick connect couplings

Please note: the above is a basic specification only. DOPAK® Samplers can be offered with a wide variety of options as mentioned below.

5 OPTIONS

- Spring return handle
- Lockable handle
- Pipe stand
- Block valve
- Flow meter
- Enclosure
- Sample cooler
- Exotic materials
- Larger/smaller sample size
