

Dopak samplers can be assembled inside an enclosure as an option. The dimensions of the enclosure depend on the size of the sampler and/or could be adapted to the customers needs.

Reasons to opt for an enclosure:

- To protect the sampler from low environmental temperature
- To protect the sampler from off shore conditions
- To provide additional protection for the operator
- To provide a more aesthetically acceptable installation

Enclosure options may include:

- Stainless steel 304 (Standard), 316 or Polyester housing as an option
- Internal insulation
- Electrical or steam heating
- Hinged door with or without safety glass/Perspex window
- Drain pan, with drain connection and drain valve
- Internal lighting
- External operation
- Spray ball for cleaning inside the enclosure
- Floor mounted pipestands
- Lockable door
- Ventilation grid
