The ability to connect the sampler close to the sample point, by means of an anti static, fire safe process ball valve with reduced bore and equipped with a spring return handle, ensures optimal retrieval of a representative, contamination free sample. The HD type sampler in on/off configuration allows product to flow directly into the sampler via a two way valve.

1 OPERATION/FUNCTION

0 - off
Provide a new septum on your sample bottle. Insert the bottle, with cap and septum into the sleeve until the septum is pierced by the needles. Put the bottle retaining clip in place.

1 - sample
Pull the handle to the “sample” position, allowing the product to flow into the sample bottle. When the required amount has been taken, release the handle. The valve will close automatically.

2 - off
Remove the bottle retaining clip and pull the bottle out from the sleeve. The septum reseals automatically.

3 FEATURES/ADVANTAGES/PROPERTIES

- Sampling directly under process conditions
- Low pressure application
- Representative sampling
- Minimal dead volume
- Closed sampling
- Anti static and fire safe process valve

Please note: the above is a basic specification only. DOPAK® Samplers can be offered with a wide variety of options as mentioned below.

5 OPTIONS

- Heating jacket for valve and needle assembly
- Continuous needle purge
- Exotic materials
- Larger/smaller sample size
