

DOPAK® Sample Bottle Adapter for liquid samplers

The sample bottle adapter (SBA) for Dopak liquid samplers offers zero emission during the filling of the bottle. The SBA ensures an advanced way of sampling without the need to use a needle assembly and a bottle with cap and septum.

The SBA for Dopak liquid samplers improves safety in the widest sense:

- Local spillage can be avoided
- Volatile substances should not escape into the atmosphere during filling of the bottle
- Vent gases can be vented through a special vent connection

Basic Specifications

Material	: SS316L, Polypropylene.
Filling tube	: 6 mm.
Connections	: 1/4" NPT.
